

- **Functional testing:** Verify correct execution with valid/invalid inputs
 - **Integration testing:** Test interaction with external systems
 - **Security testing:** Validate auth, input sanitization, rate limiting
 - **Performance testing:** Check behavior under load, timeouts
 - **Error handling:** Ensure proper error reporting and cleanup
-

Documentation Requirements

- Provide clear documentation of all tools and capabilities
- Include working examples (at least 3 per major feature)
- Document security considerations
- Specify required permissions and access levels
- Document rate limits and performance characteristics
